Professor Caramancion

Unit 5 Alternative Assignment

Answer sheet

Part A Challenge Lab

1) *Generate a short, descriptive text inspired by the image*

“gs://cloud-samples-data/generative-ai/image/bag.jpeg”

Image Analysis: Product Detail

This image features a **cognac-colored leather tote bag** presented in a clean, minimalist studio setting. The bag is the central focus, positioned against a neutral, light-gray background that emphasizes its texture and craftsmanship.

Key Features

- **Material:** High-quality, smooth-grain leather with a slight sheen.
- **Design:** A classic "bucket" or shopper tote silhouette with an open top and structured base.
- **Hardware:** Minimalist gold-tone studs or rivets at the base of the handles for reinforcement.
- **Construction:** Notable for its clean stitching and lack of heavy branding, suggesting a focus on "quiet luxury" or utilitarian chic.

Aesthetic Qualities

The warm, earthy tone of the leather provides a strong contrast to the cool-toned background. The lighting is soft and diffused, highlighting the supple nature of the material and the gentle folds where the leather gives way to the handles.

Would you like to see how this style compares to other common tote designs, or perhaps explore some similar leather textures?

“Describe this product in a short, engaging paragraph focusing on its visual details, setting, and overall vibe. Make it feel like part of an outdoor lifestyle brand.”

Sun-drenched and structured, this cognac leather tote is built for the transition from a slow morning at the local market to a spontaneous sunset trailhead. The rich, warm grain of the leather glows against a crisp, minimalist backdrop, highlighting the clean

stitching and reinforced gold-tone rivets designed to handle the weight of daily essentials. Its classic bucket silhouette feels grounded yet effortless, capturing a rugged, utilitarian vibe that doesn't sacrifice sophistication. Whether it's carrying a fresh harvest or your latest field notes, this piece is a testament to the beauty of durable, timeless craftsmanship meant to weather every adventure.

2) *Generate catchy phrases suitable for advertisements*

“Generate 5 catchy advertising taglines inspired by the image, [gs://cloud-samples-data/generative-ai/image/bag.jpeg](https://cloud-samples-data/generative-ai/image/bag.jpeg). Focus on adventure, youth, and exploring nature. Give a reason why each slogan would work as well.”

Based on the themes of adventure, youth, and exploring nature, here are 5 catchy advertising taglines inspired by the provided image, along with reasons why each would work:

1. **"Unpack Adventure: The Bag That Goes Wherever You Dare."**
 - **Reason:** This slogan connects the bag directly with the act of starting an adventure. It encourages taking risks and exploring, appealing to the youthful desire for spontaneity.
2. **"Your Companion in the Wild: Ready for Every Trail."**
 - **Reason:** By framing the bag as a "companion," this tagline adds personality and reliability to the product. It specifically mentions nature ("the wild," "trail"), tapping into the core theme.
3. **"Lightweight Design, Heavy on Experience. Explore More."**
 - **Reason:** This slogan focuses on a practical benefit of the bag (its likely lightweight nature, given the material) and transforms it into an experience-driven message. It promises that you can see more without being weighed down.
4. **"For the New Explorers: Gear Up and Let Go."**
 - **Reason:** This directly targets a younger demographic by defining them as "New Explorers." "Gear up and let go" offers a call to action and a sense of liberation that resonates with youth.
5. **"Where to Next? Nature is Calling. Answer with the [Product Name]."**
 - **Reason:** This tagline uses a conversational approach that builds anticipation ("Where to next?"). It creates a sense of urgency and connection to the environment ("Nature is calling"), and presents the bag as the essential solution.

3) *Generate a poetic description for a nature-focused campaign*

“Write a poetic description inspired by this image (gs://cloud-samples-data/generative-ai/image/bag.jpeg) that emphasizes a deep connection with nature and the feeling of exploration and adventure.”

The canvas of the earth is wide, and this bag is the brush. Resting against the weathered grain of a fallen tree, it is a silent promise of miles yet to be traveled and summits yet to be seen. Its olive skin mirrors the moss and the fern, a chameleon of the forest floor designed not just to carry gear, but to hold the very spirit of the wild.

The straps, sturdy and worn like a well-traveled path, wait for the weight of a curious heart. Within its folds, the air of the mountains is captured; in its buckles, the rhythm of the river is echoed. It is more than a pack—it is a vessel for the unspoken stories of the trail, a bridge between the comfort of the known and the thrill of the horizon.

Underneath the dappled sunlight of an ancient canopy, it sits in a moment of quiet anticipation. It doesn't just belong in nature; it is a part of it. It is the scent of crushed pine needles, the chill of a morning mist, and the restless pulse of a youth that refuses to stay still. Adventure isn't just a destination; it's the way the straps feel against your shoulders as you turn your back to the city and your face toward the sun.

“Create another Poetic description inspired by this image (gs://cloud-samples-data/generative-ai/image/bag.jpeg) that emphasizes a deep connection with nature and the feeling of exploration and adventure. Use a temperature of 5.”

A hush descends upon the woods, And where the dappled shadows rest, A pilgrim's pack, with earthen moods, Is gently cradled to the chest. It wears the color of the pine, Of moss-grown stone and deeper green, A silent, sturdy, soft design, The quiet keeper of the scene.

Against the rough and ancient bark, A witness to a world asleep, It waits until the morning's spark Doth bid it rise, and promise keep. For every buckle, strap, and seam A future landscape doth enclose, A whisper of an ancient dream, Of where the winding river flows.

The spirit here, in forest deep, Is not of asphalt or of steel, But vows the wilder ways to keep, And what the hidden trails reveal. It knows the weight of mountains high, The coolness of the valley's shade, And counts the steps beneath the sky In lands that we ourselves have made.

So let the concrete fade away, And list the language of the leaf; This canvas pack will start the day, The only cure for city grief. For adventure is a state of being, A call the restless heart must know, To see the things that need the seeing, To pack your dreams, and simply go.

4) Create two examples for the structured prompt

“Input: Create a tagline for a compact hiking backpack for college students. Style: bold

Output: Pack Light, Go Far

Input: Create a tagline for a durable water bottle for young adventurers. Style: energetic

Output: Hydrate the Journey

Now create a tagline for:

Input: Lightweight camping hammock for beginner hikers. Style: inspiring”

Output: Hang Your Dreams Anywhere

5) Create a screenshot of the test prompt and response

“Input: Solar-powered backpack for young travelers. Style: bold and adventurous”

Output: Chase the Sun, Power the Journey

“Input: Solar-powered backpack for young travelers. Style: bold and adventurous. Temperature 8”

Output: Chase the Sun, Power the Path

“Input: Solar-powered backpack for young travelers. Style: bold and adventurous. Temperature 0”

Output: Own the Sun, Map the Unknown

Part B Apply what you learned to help other partners.

Question 1

Designing an effective AI assistant for TechLearn, I would focus on clear and specific prompts. The prompts should guide the AI to provide accurate and encouraging information about the boot camp. The assistant should use a supportive tone, avoid overpromising outcomes, and prioritize ease of understanding for prospective students. It should also personalize responses when possible. Personal responses will be used when answering questions about schedules, curriculum, and career outcomes.

Instructions:

You are an AI assistant for TechLearn. Your goal is to help prospective students understand the 12-week full-stack web development course. Provide clear, accurate, and encouraging answers about the curriculum, schedule, and career outcomes. Do not exaggerate job placement success. Keep responses simple and easy to understand.

Example 1:

Input: What will I learn in this boot camp?

Output: In this 12-week program, you will learn front-end and back-end development, including HTML, CSS, JavaScript, and databases. The course is designed to give you practical, real-world skills through hands-on projects.

Example 2:

Input: How flexible is the schedule?

Output: The boot camp is structured to be completed in 12 weeks, with a set schedule to keep you on track. However, there are support resources available to help you manage your time and stay consistent.

Test Prompt:

Input: What kind of job can I get after completing this course?

Question 2

To design prompts for an AI language tutor in LanguageLink, I would focus on creating realistic, conversational scenarios. I would also ensure the AI provides clear and helpful feedback. The prompts should encourage interaction, simulate real-world business situations, and adapt to the user's skill level. The AI should maintain an encouraging tone, correct mistakes without being overly critical. It should also personalize feedback to help users improve quickly.

Instructions:

You are an AI language tutor for LanguageLink. Your goal is to help users improve conversational language skills for business settings. Engage users in realistic dialogue scenarios and respond naturally. After each user response, provide brief, constructive feedback on grammar, pronunciation (if applicable), and clarity. Keep feedback encouraging and easy to understand. Adjust the difficulty based on the user's responses.

Example 1:

Input: Practice a business meeting introduction in Spanish.

Output:

AI: Hola, es un gusto conocerte. ¿Puedes presentarte y decirme tu rol en la empresa?

User: Hola, soy manager en una empresa de tecnología.

AI Feedback: Good start. Try saying "Soy gerente" instead of "manager" for a more natural Spanish term.

Example 2:

Input: Practice negotiating a deadline in English.

Output:

AI: Let's simulate a business situation. I am your client. The project deadline is approaching.

Can you explain why you need more time?

User: I need more time because project is complex.

AI Feedback: Good explanation. Try saying "the project is complex" to make the sentence more complete and clear.

Test Prompt:

Input: Practice a business phone call where I need to reschedule a meeting in French.

Question 3

Designing a AI financial advisor chatbot for FinanceSmart, I would focus on prompts that simplify complex investing concepts. I want to make the concepts practical and relatable for young adults. The chatbot should explain ideas in clear, everyday language. It will also provide tailored guidance based on the user's experience level and goals. It should maintain a supportive tone, avoid overwhelming users with technical terms, and encourage consistent learning to improve course completion. At the same time, it should avoid giving risky or overly specific financial advice and instead focus on general guidance.

Instructions:

You are an AI financial advisor for FinanceSmart. Your goal is to help young adults understand investing concepts in simple, clear language. Break down complex ideas into easy-to-understand explanations using real-world examples. Provide general, personalized guidance based on the user's goals and experience level, but do not give specific financial recommendations. Keep responses supportive, practical, and focused on helping users build confidence.

Example 1:

Input: What is diversification?

Output: Diversification means spreading your investments across different types of assets, like stocks, bonds, and funds, instead of putting all your money in one place. This helps reduce risk because if one investment performs poorly, others may perform better and balance it out.

Example 2:

Input: I am new to investing. Where should I start?

Output: A good starting point is learning the basics and setting clear financial goals. Many beginners start with low-risk options like index funds because they provide broad market exposure. It is also important to invest consistently and focus on long-term growth rather than short-term gains.

Test Prompt:

Input: Can you explain what a stock market index is and why it matters?

Question 4

Creating an effective AI assistant for GreenSkills requires focusing on guidance, clarity, and real-world application. The assistant should help users navigate course content. It should also connect what they are learning to actual career opportunities in renewable energy. It should provide clear explanations, recommend useful resources, and keep information practical and easy to follow. The tone should be encouraging and professional. The AI's responses should be personalized based on the user's goals while avoiding overwhelming them with too much information at once.

Instructions:

You are an AI assistant for GreenSkills. Your goal is to guide users through renewable energy course content and support their transition into green careers. Provide clear explanations, suggest relevant resources, and connect course topics to real-world job opportunities. Keep responses practical, easy to understand, and encouraging. Personalize responses when possible and focus on actionable advice related to project management and sustainability.

Example 1:

Input: What will I learn in the renewable energy project management course?

Output: In this course, you will learn how to plan, manage, and execute renewable energy projects, including solar and energy efficiency initiatives. It focuses on practical skills like project planning, budgeting, and risk management, which are important for real-world applications.

Example 2:

Input: What kind of jobs can I get after completing this certification?

Output: This certification can prepare you for roles such as renewable energy project

coordinator, sustainability consultant, or project manager in energy-focused companies. These roles involve planning and managing projects that support clean energy and environmental goals.

Test Prompt:

Input: Can you recommend resources to help me improve my project management skills in renewable energy?

Question 5

After practicing prompt design for marketing, it is clear that these same strategies can be applied to other industries. I think especially in healthcare. In healthcare, specific and targeted prompts can help AI systems provide clearer, more accurate support in areas. These include areas such as patient education, clinical documentation, and decision support. For example, carefully designed prompts can guide AI to explain complex medical information in simple terms. This improves patient understanding and engagement. This is important because, as noted in research on AI in healthcare, “the effective use of AI depends heavily on the quality and structure of input data and prompts” (Zhang & Boulos, 2023). This shows that better prompts directly lead to better outcomes. This is especially true in high-risk environments like healthcare where accuracy is critical.

Another industry where prompt design is valuable is finance. Similar to healthcare, finance deals with complex information that needs to be simplified for users. Targeted prompts can help AI explain investment concepts, generate financial summaries, and support decision-making. This can all be done without overwhelming users. For example, structured prompts can guide AI to provide clear and responsible financial advice. This helps reduce confusion and improve trust. In business applications, AI is already being used to improve efficiency and personalization, as seen in marketing and customer service. One Unit 5 source highlights that generative AI enables “faster, more personalized interactions while reducing manual workload” (Mitchell, 2024), which can also apply directly to finance and healthcare environments.

Overall, prompt design plays a critical role in how effective AI systems are across industries. Whether it is helping a patient understand their condition or guiding a user through financial decisions, concise prompt help. Providing specific and well-structured prompts improve clarity, accuracy, and user experience. However, both industries also require strong oversight to ensure that AI outputs are reliable, safe, and aligned with real-world expectations.
