Unit 7 Assignment: Final Creative Project: Marketing Campaign using Generative AI

Matthew Kolonich

Dr. Holbert

09/29/2025

Prompts:

Artifact 1-Slogan-ChatGPT

Prompt 1-*You are a creative marketing expert developing a slogan for a new sports card grading service called “QuickTurn Grading.” The brand promises fast turnaround, fair pricing, and trustworthy authentication for everyday collectors, live breakers, and small resellers. Produce 10 concise slogan options (3–7 words). Keep them plain-spoken, credible, and hobby-savvy—not corporate or shouty. Avoid exclamation points or unrealistic promises like “instant” or “guaranteed.”*

ChatGPT said:

*Here are 10 plain-spoken, hobby-savvy slogan options for **QuickTurn Grading** (3–7 words each):*

- 1. **QuickTurn Grading, Built for Collectors***
- 2. **Fast, Fair, Trusted Card Grading***
- 3. **Your Cards, Back in Record Time***
- 4. **QuickTurn Grading You Can Trust***
- 5. **Speed and Accuracy for Every Collector***
- 6. **Turnaround That Keeps the Hobby Moving***
- 7. **Trusted Grading, Without the Wait***
- 8. **QuickTurn Grading: Fair and Reliable***
- 9. **Cards Back Sooner, Confidence Stronger***
- 10. **Grading Made Simple, Grading Made Quick***

*Would you like me to **narrow these down into 3 focused themes** (speed, trust, and control/visibility), like we did with your earlier tagline sets, so you have a structured batch for testing?*

Iteration 1:

Refine the list so that at least one option clearly emphasizes speed, one emphasizes trust/accuracy, and one emphasizes visibility/control (tracking and transparency). Keep tone professional but simple, no hype.

ChatGPT said:

*Got it — here’s a refined list of 9 options, making sure at least one speaks to **speed**, one to **trust/accuracy**, and one to **visibility/control**. Tone is plain, credible, and hobby-savvy:*

Speed-focused

1. *QuickTurn Grading, Built for Speed*
2. *Cards Back Sooner, Confidence Stronger*
3. *Turnaround That Keeps the Hobby Moving*

Trust/Accuracy-focused

4. *Trusted Grading, Without the Wait*
5. *Fair, Consistent, Reliable Card Grading*
6. *QuickTurn Grading You Can Trust*

Visibility/Control-focused

7. *Track Every Step with QuickTurn*
8. *Transparent Grading for Everyday Collectors*
9. *See Where Your Cards Stand*

Would you like me to **condense this down to one polished “official slogan”** that balances all three themes — or would you prefer to keep separate candidate options for testing?

Iteration 2:

From the refined list, narrow to just 3 strong candidates. Make sure they are short enough for signage and digital banners, sound collector-friendly, and could be spoken naturally in conversation. Then recommend 1 as the official slogan for QuickTurn Grading. Emphasis on slogan with company name.

ChatGPT said:

Here are three refined, collector-friendly candidates short enough for signage, digital banners, and casual conversation:

1. **QuickTurn Grading, Built for Speed**
– Crisp, hobby-savvy, directly signals the brand’s fast turnaround.
2. **QuickTurn Grading You Can Trust**
– Clear and professional, highlights reliability and authentication accuracy.
3. **Track Every Step with QuickTurn**
– Emphasizes transparency and control, reassuring collectors about visibility.

Recommended Official Slogan:

☞ **QuickTurn Grading You Can Trust**

It places the company name up front, is short and conversational, and leans on trust — the most critical value in card grading — while still working across signage, social media, and spoken word

The first artifact I created was the official slogan for QuickTurn Grading, I began with a broad original prompt that asked for ten slogan options. I wanted with this prompt to generate a wide variety of plain spoken, hobby-savvy phrases that reflected the service’s three key values: speed, fairness, and trust. I had it create 10 slogans to start with emphasizing the 3 key values. My first iteration refined the list to ensure that at least one option clearly emphasized each of the brand values of speed, trust/accuracy, and

visibility/control. The slogans now would align more directly with what collectors care about. In my second iteration, I asked for a narrowed set of three strong candidates that were short, conversational, and easy to use. I want the slogan to be able to be used across signage, banners, and social posts, with the company name included for brand recognition. I chose to stop at this point because the process yielded one polished, official slogan—**“QuickTurn Grading You Can Trust”**—that balances professionalism with collector-friendly language. This slogan emphasizes the most important value in the grading hobby, trust, while still working naturally across multiple marketing channels. It also uses the company name in a free flowing natural language manner.

Artifact 2-Poster Ad-Dall-E 3

Prompt 1-Create a poster advertisement for QuickTurn Grading, a sports card grading service. The poster should highlight the brand’s three values: fast turnaround, fair pricing, and trustworthy authentication. Include a bold headline, a short subheadline, and the official slogan “QuickTurn Grading You Can Trust.” Generate a DALL·E 3 image for the background visual. The visual should be modern, clean, and hobby-focused, with sports card slabs and everyday collectors. Do not use real player likenesses; use generic card art to avoid licensing issues. Design should be eye-catching and printable. Display image using DALL-E 3.

ChattGPT said:

Iteration 1:

Refine the poster so it looks like a modern sports marketing ad—bold fonts, minimal text, clean layout. Make sure the slogan is centered at the top like a brand stamp. Make sure the whole slogan, "QuickTurn

Grading You Can Trust" is all together. . Image prompt should emphasize sharp slabs, good lighting, and subtle speed cues (like motion blur or streaks) Make card images look more realistic.

ChatGPT said:

Iteration 2:

Refine the QuickTurn Grading poster ad again. Keep the modern sports marketing look with bold fonts and minimal text, but adjust the messaging hierarchy: Headline should emphasize quickness (core value). Subheadline should highlight speed and fair pricing together. The official slogan, "QuickTurn Grading You Can Trust," should be centered at the bottom as the closing brand stamp. For the image, keep the clean, sharp slab visuals with realistic textures and lighting, but place one hero slab in the center foreground. Add subtle background elements like a local card show setting (tables, blurred collectors) to give context and authenticity. Incorporate speed cues (light streaks, soft motion blur) in the background without distracting from the slab. Color palette: teal, gray, and white for a professional, modern feel. Ensure it is poster-ready, vertical format, high resolution for print.

My second artifact was a poster advertisement for QuickTurn Grading. In my original prompt, I wanted to establish the basic structure of the ad. I wanted a bold headline, a short subheadline, and the official slogan “QuickTurn Grading You Can Trust.” I also wanted a modern, hobby-focused background image of slabs and collectors. This gave me a foundation for both the copy and the visuals. In my first iteration, I refined the design to look more like a professional sports marketing ad. I wanted to add and expand on bold fonts, a clean layout, and a focus on sharp, realistic-looking slabs. I also emphasized subtle speed cues in the imagery to reinforce the idea of quick turnaround. For the second iteration, I adjusted the messaging hierarchy to make quickness the headline focus, tied speed and fair pricing together in the subheadline, and positioned the slogan at the bottom as a brand stamp. I refined the visual by centering one hero slab in the foreground and adding a blurred local card show background for authenticity. I chose to stop after the second iteration because the ad successfully balanced clarity, professionalism, and brand consistency. The text and visuals worked together to highlight the three values of fast turnaround, fair pricing, and trustworthy authentication while also keeping the slogan as the campaign’s anchor.

Artifact 3-Landing Page Hero/Website Ad-Dall-E 3

Prompt 1- Create a landing page hero section for QuickTurn Grading, a sports card grading service. The hero should include: A bold headline that highlights the main value. A clear subheadline that supports the headline with secondary benefits. A simple call-to-action (CTA), like a button or phrase collectors would click/tap. The official slogan “QuickTurn Grading You Can Trust.” Also, create a DALL·E 3 image

prompt for the background: modern, clean, and hobby-focused, showing sports card slabs and collectors. No real player likenesses; use generic card art. Design should feel professional and credible.

Iteration 1- Refine the text so that the headline emphasizes speed, the subheadline emphasizes fairness and trust, and the slogan appears as a supporting brand line beneath the CTA. Keep the language collector-friendly and short enough to be read at a glance. For the image prompt, emphasize a hero slab in

the foreground with subtle glowing edges, clean modern background, and teal/gray accent colors

Iteration 2- Refine so the headline is just 3–5 words (scroll-stopping and poster-friendly), the subheadline is one sentence, and the CTA is action-driven (e.g., “Start Your Submission”). The slogan should be placed at the bottom as a closing statement. For the image prompt, keep one hero slab at center focus with a blurred background showing a collector at a laptop (to imply digital tracking and submissions). Include subtle motion streaks around the slab for speed. Vertical orientation, clean, mobile-friendly design.

The third artifact I designed was a landing page hero for QuickTurn Grading. The landing page hero is an ad usually at the top of a page that is usually clickable. I began with the original prompt to establish the key structure I wanted. I wanted a bold headline, a subheadline, a clear call-to-action tab, and the official slogan. I wanted it to be supported by a clean, hobby-focused background image. This provided a strong starting point that aligned with typical landing page design. In my first iteration, I refined the messaging so the headline emphasized speed while the subheadline highlighted fairness and trust. I wanted to ensure that each brand value had a clear place in the copy. I also added design direction for the image by focusing on a hero slab with glowing edges and a highlighted submission button to guide attention. In the second iteration, I streamlined the text further by shortening the headline to 3–5 words for stronger impact, simplifying the subheadline to one concise sentence, and making the CTA more action-driven with “Start Your Submission.” I also added a blurred background with a collector at a laptop to connect the visuals to the digital submission process. I chose to stop after this iteration because the layout and

content achieved balance. The image was bold, clear, and mobile-friendly while visually and textually reinforcing all three values of the brand, with the slogan anchoring the ad at the bottom.

Artifact 4-Blog Style Explainer-ChatGPT

Prompt 1- Write a blog-style explainer for QuickTurn Grading titled “Why Fast, Fair Grading Matters.” The tone should be **conversational and collector-friendly**—like it’s written by someone active in the hobby, not a corporation. The post should be 400–500 words and cover:

- Why turnaround time matters to collectors and resellers
 - Why fairness and trust are critical in grading
 - How QuickTurn Grading solves both issues with clear, reliable processes
- End with the official slogan: **“QuickTurn Grading You Can Trust.”**

Why Fast, Fair Grading Matters

If you’ve been in the card hobby for more than a minute, you know grading is one of the biggest game changers out there. A slabbed card instantly tells buyers, sellers, and traders what they’re holding. But let’s be honest—grading isn’t just about sealing a card in plastic. It’s about time, trust, and the peace of mind that comes with knowing your collection is in good hands. That’s why fast, fair grading matters more than ever.

Why turnaround time matters

Collectors don’t want their cards sitting in limbo for months. Maybe you’ve pulled a hot rookie and want it slabbed before the hype fades. Maybe you’re prepping for the next card show or an eBay auction and every day counts. Resellers especially feel this pressure—delays can mean missed opportunities and real money left on the table. Fast turnaround isn’t about impatience—it’s about keeping pace with a hobby that moves fast.

Why fairness and trust are critical

Speed doesn’t mean much if you can’t trust the grade on the label. Collectors want to know their cards are being judged on a consistent, level playing field. A “9” should feel like a “9,” no matter when or where it was graded. And let’s face it, the hobby runs on trust. If buyers or sellers start second-guessing whether a slab is accurate, the whole system breaks down. Fair, reliable grading protects not just individual collectors but the integrity of the market itself.

How QuickTurn Grading bridges the gap

That’s where QuickTurn Grading comes in. We’ve built our process around the two things collectors care about most: speed and fairness. Our turnaround times are designed for hobbyists who don’t want to wait forever, but without cutting corners. Each card goes through a clear, step-by-step process so you know exactly what’s happening and when. Transparency is key—collectors can track submissions and see where their cards are in the pipeline.

On the fairness side, we’ve made accuracy the cornerstone of everything we do. Our graders follow consistent standards that prioritize the condition of the card above all else. No gimmicks, no guessing games—just straightforward grading collectors can trust. Whether you’re a weekend binder-flipper, a bulk submitter, or a serious reseller, our goal is the same: give you a reliable grade, delivered quickly, so you can enjoy the hobby on your terms.

Closing thoughts

At the end of the day, grading should support the fun of collecting, not get in the way. Fast turnaround keeps your cards in play, and fair grading keeps the hobby’s foundation strong. QuickTurn Grading is here to deliver both—because your collection deserves nothing less.

QuickTurn Grading You Can Trust

Iteration 1- Break the explainer into three short sections with subheadings: 1) Speed in the Hobby, 2) Fairness and Trust, 3) How QuickTurn Grading Delivers. Use short paragraphs and bullet points where helpful so the text is scannable for online readers. Add a clear call-to-action near the end

Why Fast, Fair Grading Matters

Speed in the Hobby

In today's card world, timing is everything. Whether you're a collector or reseller:

Hot rookies cool quickly—you want und isn't just a convenience; it keeps your cards in play and your hobby momentum alive.

Fairness and Trust

Speed means nothing without fairness. A grade should always feel consistent and reliable.

- Trust keeps the market strong. Buyers and sellers need confidence in every slab.
- Fair grading protects value. A "9" from one card should match a "9" from another.
- Consistency matters. No gimmicks, no surprises—just accuracy across the board.

The hobby runs on trust. Without it, trades stall, auctions lose steam, and collectors lose confidence.

How QuickTurn Grading Delivers

That's where QuickTurn Grading comes in. We've built our process to serve collectors first.

- Fast turnaround that respects your time without cutting corners.
- Clear tracking so you always know where your cards are in the pipeline.
- Reliable standards applied to every card, every time.

We make grading simple, transparent, and collector-friendly. You get your slabs back quickly—and you can trust the grade on the label.

Ready to Grade Smarter?

Stop waiting months and start enjoying your cards sooner. Submit today and see the difference for yourself.

QuickTurn Grading You Can Trust

Iteration 2- Make the voice sound even more like a fellow collector writing to peers—less polished corporate phrasing, more plain-spoken lines like “We’ve all been there” or “Nothing’s worse than waiting months.” Add hobby-specific references (card shows, live breaks, selling on eBay/Whatnot) to make it feel authentic. Keep it friendly and trustworthy.

Why Fast, Fair Grading Matters

Speed in the Hobby

We've all been there—you pull a hot rookie out of a live break, and now you're itching to get it slabbed before the hype cools off. Nothing's worse than sending your cards off and waiting months, wondering if they'll come back in time for the next card show or before that eBay auction ends.

In this hobby, speed matters:

- **Card shows don't wait.** If your slabs aren't ready, you're missing deals on the floor.
- **Online sales move fast.** eBay and Whatnot buyers want graded cards yesterday.
- **Momentum is real.** Grading delays kill excitement and can cost you real money.

A quick turnaround keeps your cards—and your hustle—moving.

Fairness and Trust

Of course, fast isn't enough if you can't believe the grade on the label. We all know the frustration when a card comes back and you're left scratching your head. Consistency and fairness are everything in this game.

Why it matters:

- **Trust makes trades possible.** If buyers can't rely on the grade, deals fall apart.
- **Fair slabs protect value.** A "9" should feel like a "9," no matter what.
- **The hobby depends on it.** Without trust in grading, the whole market loses steam.

At the end of the day, you just want to know your cards are judged the same way as everyone else's—straightforward and fair.

How QuickTurn Grading Delivers

That's exactly what QuickTurn Grading is built for. We're hobby people ourselves, and we know the pain points. Our process focuses on what matters most:

- **Quick turnaround times** so you're not stuck waiting months.
- **Transparent tracking** so you always know where your subs are.
- **Reliable, fair standards** applied card after card, slab after slab.

No gimmicks, no corporate runaround—just grading that keeps you moving and gives you confidence when you're selling, trading, or showing off at your next event.

Ready to Sub Your Cards?

If you're tired of the long waits and head-scratching grades, give QuickTurn a shot. Start your submission today and see the difference.

QuickTurn Grading You Can Trust.

The fourth artifact I created was a blog-style explainer titled *"Why Fast, Fair Grading Matters."* A blog-style explainer is a short, conversational article that educates readers on a key idea while reinforcing

brand credibility. With the original prompt I wanted a collector-friendly article that clearly explained why speed and fairness matter in grading and how QuickTurn Grading delivers on both. In my first iteration, I refined the structure to make it more scannable by adding subheadings, shorter paragraphs, and bullet points so that readers could easily pick up the key ideas online. In the second iteration, I shifted the voice to feel more authentic to the hobby, using plain-spoken phrases like “we’ve all been there” and references to card shows, live breaks, and eBay/Whatnot to make it sound like advice from a fellow collector rather than polished corporate marketing. I chose to stop after this stage because the explainer achieved the right mix of clarity, structure, and authentic tone, making it engaging, trustworthy, and well-aligned with the QuickTurn Grading brand.

Artifact 5-Audio/Jingle-Suno

Prompt 1- Write a **30-second audio script** for QuickTurn Grading, a sports card grading service. The script should highlight the brand’s three values: **fast turnaround, fair pricing, and trustworthy authentication.**

End with the official slogan: **“QuickTurn Grading You Can Trust.”**

The tone should be upbeat and hobby-friendly, written like a radio spot or podcast ad. Include short spoken lines and a simple jingle hook at the end.

[..\Downloads\QuickTurn Grading Jingle.mp3](#)

Iteration 1- Refine the script so the ad opens with a relatable collector scenario (“pulled a hot rookie...”) and then quickly introduces QuickTurn Grading as the solution. Keep the pacing quick, with 2–3 second lines. Make the jingle hook repeat the slogan with a simple melody suggestion (e.g., rising three-note phrase).

[..\Downloads\QuickTurn Grading Jingle \(1\).mp3](#)

Iteration 2- Refine again to make the voice plain-spoken and hobby-native—like a fellow collector talking to peers. Add references to eBay sales, card shows, and live breaks to make it authentic. Keep the jingle short, catchy, and easy to remember. Make sure the slogan appears both in spoken dialogue and as the jingle.

[..\Downloads\Quickturn Grading Jingle \(2\).mp3](#)

The fifth artifact I created was a 30-second audio script and jingle for QuickTurn Grading. I began with the original prompt because I wanted a short, upbeat radio-style ad that highlighted the brand’s three values. I wanted the jingle to include our fast turnaround value, our fair pricing value, our trustworthy authentication and the jingle ending with the official slogan. In my first iteration, I refined the script to open with a relatable collector scenario. I thought pulling a hot rookie card would be a good example so that listeners could immediately connect with the experience. I also added a structured verse-and-chorus format with a rising three-note jingle to make it catchy and memorable. In the second iteration, I shifted the voice to sound more hobby-native and authentic, weaving in references to eBay sales, card shows, and live breaks so it felt like a fellow collector was speaking. I kept the jingle short and direct while ensuring the slogan appeared in both the spoken dialogue and the chorus. I chose to stop after this stage because the final version balanced clarity, authenticity, and memorability, while sounding like something collectors could genuinely relate to in the hobby community.

Iterations:

Artifact 1: Slogan Development

For my first artifact, I wanted to establish a strong, memorable slogan for QuickTurn Grading. My original prompt asked for ten options that were concise, collector-friendly, and highlighted the brand's three values. QuickTurn Grading's three values are fast turnaround, fair pricing, and trustworthy authentication. This gave me a broad set of ideas to work with. In my first iteration, I refined the list by asking the AI to ensure at least one slogan clearly emphasized speed, one emphasized trust and accuracy, and one focused on visibility or tracking. This allowed me to align the outputs more closely with the three pillars I wanted my campaign to stand on. This also gave me different options to look at to decide what would work best for the slogan. For the second iteration, I asked the AI to narrow the options down to just three strong candidates that could be easily used on signage or digital banners. From there, I selected the official slogan, "QuickTurn Grading You Can Trust." I stopped at this point because the slogan felt polished, authentic, and versatile enough to anchor the rest of the campaign. I also liked how the company name is also part of the sentence.

Artifact 2: Poster Advertisement

The second artifact was a poster advertisement designed to showcase QuickTurn Grading's values in a easily read poster ad. My original prompt established the basics I was looking for. I wanted a bold headline, a subheadline, the official slogan, and a DALL·E 3 prompt for the background image. This gave me a solid poster but I wanted more refinement to feel like a professional marketing piece. In my first iteration, I asked for the design to look more like a real sports marketing ad with bold fonts, minimal text, and sharp slab visuals with subtle speed cues like motion streaks. This made the poster feel more appealing and visually striking. For the second iteration, I refined the messaging hierarchy, shifting the headline to emphasize quickness, the subheadline to highlight speed and fair pricing together, and moving the slogan to the bottom as a closing brand stamp. I also requested that the image include a central hero slab with a blurred card show background for authenticity. I think the card show also adds a relatable feel to collectors. After this iteration, I stopped because the ad achieved the balance I wanted. The ad was bold, clean, and professional, while highlighting the three values in both text and visuals.

Artifact 3: Landing Page Hero

For my third artifact, I developed a landing page hero section that could serve as the entry point for QuickTurn Grading's website. The original prompt asked for a headline, subheadline, call-to-action, and slogan, paired with a DALL·E 3 image prompt that depicted slabs and collectors in a hobby-focused, professional design. This created a good foundation, but I wanted more impact. In the first iteration, I refined the text hierarchy so that the headline emphasized speed, the subheadline emphasized fairness and trust, and the slogan appeared beneath the call-to-action as

a supporting brand line. I also emphasized sharper slab visuals in the image prompt with glowing edges and a highlighted “Start Your Submission” button. In the second iteration, I made the text more concise: a short, scroll-stopping headline of 3–5 words, a single-sentence subheadline, and a stronger action-driven CTA. The image was also refined to include one central hero slab with a blurred background showing a collector at a laptop to suggest digital submissions. I stopped after this stage because the design achieved clarity, simplicity, and mobile-friendly readability, while visually reinforcing both the product and the brand promise.

Artifact 4: Blog-Style Explainer

The fourth artifact was a blog-style explainer titled “Why Fast, Fair Grading Matters.” I started with a prompt that asked for a 400–500 word article covering why turnaround time matters, why trust is essential, and how QuickTurn Grading delivers on both, closing with the official slogan. This draft provided a strong baseline but leaned toward a corporate tone. In the first iteration, I improved the structure by breaking the article into three scannable sections: Speed in the Hobby, Fairness and Trust, and How QuickTurn Grading Delivers. I also asked for adding bullet points to make it easier to skim. This created a better and easier reading for online users. In the second iteration, I focused on the voice, asking the AI to make it sound more like a fellow collector writing to peers. This included plain-spoken lines like “we’ve all been there” and hobby-specific references such as eBay sales, card shows, and live breaks. These changes gave the explainer a more authentic and relatable feel. I chose to stop here because the explainer now had the right balance of structure, readability, and authenticity, making it both informative and trustworthy.

Artifact 5: Audio/Jingle Advertisement

The fifth artifact was a 30-second audio ad with a short jingle. The original prompt asked for a radio-style script that highlighted QuickTurn Grading’s three values and closed with the slogan. The first draft delivered a straightforward spot, but I wanted it to feel more engaging. For my first iteration, I refined the script to open with a relatable collector scenario, such as pulling a hot rookie from a break, before introducing QuickTurn Grading as the solution. I also structured the lyrics into verses and a chorus with a rising three-note phrase in the jingle to make it catchy. In the second iteration, I shifted the voice again to sound more plain-spoken and hobby-native, adding specific references to eBay sales, card shows, and live breaks. This gave the ad more authenticity and made it feel like something collectors would actually hear in their community. I stopped at this point because the final version captured the right mix of relatability, hobby culture, and memorability, anchored by a catchy jingle that repeated the slogan.

Image Test/Verification:

M

Prompt 1-Analyze the image

Edit

This is a promotional advertisement for a card grading service called "QuickTurn Grading" (QCG). Here's what I can observe:

Main Elements:

- Bold white text reading "GRADE YOUR CARDS FAST" as the primary headline
- Tagline: "Trusted, fair-priced grading for collectors and resellers"
- Company slogan at bottom: "QuickTurn Grading You Can Trust"

Featured Card:

- Shows a graded basketball card in a protective slab
- The card appears to be from a "Rising Stars Basketball" set
- Features a player in what looks like a teal/turquoise uniform with number 32
- The card has received a grade of 9 from QCG
- Card is labeled as "RISING STARS" at the bottom

Design:

- Teal/turquoise color scheme throughout
- Blurred background showing someone (presumably examining cards)

- Call-to-action button saying "Start Your Submission"
- Professional, clean layout typical of service advertisements

Purpose: This appears to be marketing material for a card authentication and grading service, targeting sports card collectors and dealers who want to have their cards professionally evaluated and encapsulated for preservation and resale value.

Retry

M

Iteration 1-Keeping the purpose in mind, make a list of 10 suggestions to improve this image

Edit

Here are 10 suggestions to improve this card grading service advertisement:

1. **Add specific turnaround time promises** - Replace "FAST" with concrete timeframes like "5-Day Turnaround" or "Results in 48 Hours" to set clear expectations and differentiate from competitors.
2. **Include pricing information** - Add a starting price like "Starting at \$15/card" or "Bulk discounts available" since the tagline mentions "fair-priced" but provides no actual pricing context.
3. **Show multiple card types** - Display 2-3 different graded cards (baseball, football, Pokemon, etc.) to appeal to collectors beyond just basketball card enthusiasts.
4. **Add customer testimonials or ratings** - Include a small testimonial quote or star rating to build immediate credibility and trust.
5. **Make the grade more prominent** - The "9" grade should be larger and more visually striking, as this is what customers are ultimately purchasing.
6. **Include submission tracking features** - Mention real-time updates, email notifications, or an online portal where customers can track their submissions.
7. **Add security/insurance messaging** - Include icons or text about insured shipping, secure handling, or guarantee policies to address collector concerns about sending valuable cards.
8. **Strengthen the call-to-action** - Change "Start Your Submission" to something more compelling like "Get Your Free Quote" or "Submit Cards Today - Free Shipping Over \$100."
9. **Show before/after comparison** - Include a small inset showing an ungraded card versus the same card graded to demonstrate the value proposition.
10. **Add company credentials** - Include years in business, number of cards graded, or professional certifications to establish authority in the grading industry.

Retry

M

Iteration 2-Narrow and refine answers to 3 choices. The 3 choices should reflect the companies' values of fast turnaround, fair pricing, and trustworthy authentication

Edit

Here are the 3 most impactful improvements that directly reinforce the company's core values:

1. Add specific turnaround time promises Replace the generic "FAST" with concrete timeframes like "48-Hour Turnaround Guaranteed" or "5-Day Express Service." This directly supports their speed promise and sets clear expectations that differentiate them from slower competitors.

2. Include transparent pricing information Add upfront pricing like "Starting at \$12/card" or "No Hidden Fees - See Full Pricing" to reinforce the "fair-priced" claim. Customers can immediately see the value proposition rather than wondering about costs, which builds trust through transparency.

3. Display authentication credentials and guarantees Add trust indicators such as "10,000+ Cards Authenticated," "Authenticity Guaranteed," or professional certifications. This directly supports their "trustworthy authentication" value by providing concrete evidence of expertise and reliability in the grading process.

These three changes work together to immediately communicate all three core values - speed, fair pricing, and trustworthiness - without cluttering the design, making the advertisement more compelling and actionable for potential customers.

I decided for the image test and verification section of my project I would use Claude because it allows me to upload images and receive detailed descriptions and analysis. I wanted to confirm that the landing page hero I generated for QuickTurn Grading communicated the brand's three key values. I wanted to make sure fast turnaround, fair pricing, and trustworthy authentication could be discerned from the image when analyzed. The landing page hero featured a bold headline, a clean subheadline, the company slogan "QuickTurn Grading You Can Trust," and a central graded card in a slab with a visible call-to-action button labeled "Start Your Submission."

I uploaded the landing page hero to Claude and asked it to describe the design. Claude provided an accurate and thorough breakdown. It identified the main headline "GRADE YOUR CARDS FAST," pointed out the supporting tagline about fair-priced grading for collectors and resellers, and correctly recognized the official slogan near the bottom. It also described the central graded basketball card with a grade of 9 in a protective slab, the teal-toned color palette, the blurred background of a person examining cards, and the presence of the call-to-action button. Claude's description showed that it was able to understand both the text and the visual layout of the landing page hero. Claude was also able to immediately recognize that this was a marketing advertisement. Claude knew that this was commercial material for a card grading service.

I wanted to further the verification process. I followed up by asking Claude to provide suggestions to improve the landing page hero. The tool offered ten recommendations to enhance the landing hero page. I next asked Claude to help narrow the suggestions down to the three that most strongly supported QuickTurn Grading's core values. The suggestions Claude included were a specific turnaround time to reinforce speed, including transparent pricing to support the fair-pricing claim, and displaying authentication credentials to enhance trust. All of the suggestions were relevant to the goals of the campaign and highlighted practical changes that could improve the clarity and appeal of the image.

Overall, I found Claude's analysis of the landing page hero to be both accurate and helpful. It focused on the core purpose of the design, which was to communicate QuickTurn Grading's strengths to collectors in a clean, professional layout. The feedback it provided aligned closely with what I intended the image to convey and offered constructive ways to reinforce the brand's message. I was satisfied that the landing page hero communicated the intended story and that Claude's input confirmed its effectiveness as a marketing piece.

Analysis of Each AI Tool:

Artifact 1: Slogan Development with ChatGPT

For the first artifact, a slogan for my company, I used **ChatGPT** as my primary text generation tool. My original prompt asked for ten concise slogan options that would appeal to everyday collectors and highlight QuickTurn Grading's key values of fast turnaround, fair pricing, and trustworthy authentication. I then refined the prompts twice. The first iteration was to categorize the slogans by speed, trust, and visibility. I used the 2nd iteration to narrow down the slogans to three strong candidates before selecting the final slogan, "QuickTurn Grading You Can Trust."

From a security perspective, I kept all the information in the prompts generic and avoided entering any private data about individuals or business transactions. ChatGPT does not store or display the images or documents from my project in ways that others can access, which minimized risk. Socially, the main consideration was to ensure that the slogans avoided making exaggerated claims or implying unrealistic guarantees, such as promising instant grading. Ethically, I focused on making sure the AI produced language that was honest and transparent because collectors depend on trustworthy communication from a grading service.

The strength of ChatGPT in this artifact was its ability to brainstorm dozens of slogan ideas quickly and adapt them to fit my brand's tone. It saved time by producing professional sounding text that I could refine. A limitation, I noticed, was that some slogans were too generic or sounded too corporate. I had to use more careful prompting to get the hobby-friendly tone I wanted. While ChatGPT was excellent for creativity and iteration, it still relied on my guidance to ensure accuracy and cultural fit within the collector community.

Artifact 2: Poster Advertisement with ChatGPT and DALL·E

The second artifact I created, the poster advertisement, I combined ChatGPT for writing the headline, subheadline, and slogan placement with DALL·E 3 to generate the visual layout. My initial prompt asked for a modern sports marketing style poster with bold fonts, a central graded card slab, and the slogan "QuickTurn Grading You Can Trust." I refined it twice. First, I wanted to make the layout cleaner and sharper with motion streaks for speed. In the 2nd iteration I wanted to adjust the messaging hierarchy so the headline focused on quickness, the subheadline paired speed with fair pricing, and the slogan anchored the design at the bottom.

In terms of security, I made sure not to upload any real customer information or identifiable card images. Using DALL·E 3 raised fewer privacy concerns since the visuals were entirely AI generated. Socially, my goal was to create an ad that resonated with hobbyists without misrepresenting what the service provides. Ethically, I needed to be careful that the AI generated card did not depict a real athlete's likeness to avoid potential copyright or licensing issues, so I specified generic card art in the prompts.

The strength of ChatGPT in this artifact was its skill in writing compelling headlines and refining messaging for clarity. DALL·E 3 excelled at producing clean and vibrant visuals that reflected the modern, trustworthy look I wanted. A limitation was that the initial images sometimes showed unrealistic card designs or did not perfectly place text, which required further prompt adjustments. This combination

of tools allowed me to create a professional looking ad, but it still needed my supervision to align with real world branding standards.

Artifact 3: Landing Page Hero with ChatGPT and DALL·E 3

The third artifact I created, the landing page hero, I again used ChatGPT. I used ChatGPT to write the headline, subheadline, call to action, and slogan placement, while DALL·E 3 created the background image. My original prompt asked for a bold headline focused on the 3 main values, a subheadline supporting secondary benefits, the slogan, and a background that showed slabs and collectors in a clean, hobby focused style. I refined the prompt twice. I shortened the headline. I wanted the headline to be a scroll stopping phrase of three to five words. I also wanted to strengthen the driven call to action, and adjust the background to feature one hero slab in the foreground with a blurred collector at a laptop to suggest online submission tracking.

Security concerns for this artifact were similar to the previous one, as no personal data was shared and the images were AI generated. Socially, I wanted the design to feel approachable and credible so that collectors visiting the landing page would immediately trust the brand. Ethically, I had to ensure that none of the AI generated visuals unintentionally resembled real sports card designs or logos.

ChatGPT's strength was in quickly delivering clean marketing copy that fit naturally into a digital landing page layout. DALL·E 3 offered flexibility in generating visually appealing backgrounds tailored to the prompts. A limitation I encountered was that the AI sometimes misinterpreted layout requests, such as the placement of the slogan or the call to action, which meant further refinements were needed to achieve the desired composition. Despite these adjustments, the final landing page hero successfully communicated all three core brand values.

Artifact 4: Blog Style Explainer with ChatGPT

The fourth artifact I created was the blog style explainer. I used ChatGPT for all text generation on this artifact. My original prompt asked for a 400 to 500 word blog post titled "Why Fast, Fair Grading Matters,". I asked it to explain the importance of speed and trust in grading and how QuickTurn Grading addresses both. The first iteration improved the structure. It broke the post into three sections with subheadings and added bullet points for easier online reading. In the second iteration, I asked ChatGPT to shift the voice to sound more like a fellow collector. I asked it to use plain spoken phrases such as "we have all been there" and include hobby specific references like card shows, eBay, and live breaks.

There was minimal security concerns with this artifact since I did not share any private information in the prompts. The main social and ethical considerations were ensuring that the explainer used respectful and accurate language that collectors could trust and relate to without exaggeration or misleading claims.

The strength of ChatGPT in this artifact was its ability to quickly draft and refine content into a friendly, conversational article that felt genuine to the hobby community. A limitation was that its first draft leaned toward a formal corporate tone and required careful prompting to achieve the informal, collector friendly style I envisioned. ChatGPT proved effective in adapting tone and structure through iterative guidance.

Artifact 5: Audio Jingle Advertisement with Suno

The fifth artifact I created was the audio script and jingle. I used Suno to write a 30 second audio ad that included both spoken lines and a simple jingle hook. The original prompt asked for a hobby friendly, upbeat radio style script highlighting fast turnaround, fair pricing, and trustworthy authentication while ending with the official slogan. In the first iteration, I asked Suno to make the opening more relatable by starting with a scenario of a collector pulling a hot rookie card and then introducing QuickTurn Grading as the solution. I also added a rising three note jingle to make the ad memorable. In the second iteration, I guided the AI to sound even more authentic to hobbyists by referencing card shows, eBay sales, and live breaks, while keeping the jingle short and catchy.

Security concerns were not significant here as the prompts did not contain personal information. The social and ethical considerations involved making sure the ad felt genuine and avoided overpromising turnaround times or results. I also wanted to ensure the script's tone stayed respectful and aligned with the community culture.

Suno's strength was in creating catchy lyrics and adjusting the voice to match the collector community's style. The background tune also went along with the mood I described and was trying to set. A limitation of Suno was that some initial lines felt too generic or commercial, so it took a few iterations to create lyrics that sounded authentic. While Suno provided strong creative support, it still required human direction to capture the right tone and message for the ad.

Overall Reflection:

I feel that the mix of AI tools I chose worked well to create a full marketing campaign for QuickTurn Grading. I relied mostly on ChatGPT for text-based content and DALL·E 3 for visuals. I used Claude to verify the landing page hero image. I brought in Suno to generate audio for the jingle in Artifact 5. Each tool added something unique to the marketing campaign. Using different Generative AI together helped me shape five distinct marketing artifacts that felt connected as a single campaign.

For the first artifact, the slogan, I used ChatGPT to brainstorm a wide range of ideas. It was helpful to see many variations quickly, and then refine them step by step until I chose the final line, “QuickTurn Grading You Can Trust.” That early success showed me how useful ChatGPT can be for exploring creative directions while still leaving me in control of the final choice. The slogan itself is great because I love it created a play on words.

For the second and third artifacts, the poster ad and the landing page hero, I combined ChatGPT’s writing skills with DALL·E 3’s ability to generate custom visuals. I liked how I could specify details such as a hero slab at the center or a blurred background with a collector at a laptop. DALL·E 3 produced images that looked polished and professional for marketing. I learned that image prompts need to be specific to get the look I wanted, but once refined the results were strong and hobby-appropriate.

The fourth artifact, the blog-style explainer, relied entirely on ChatGPT. The first draft sounded too corporate for the hobby audience. I asked for a more peer-to-peer voice with references to card shows, live breaks, and eBay. The adjustments made the jingle feel more authentic and approachable. That experience showed me how much tone matters with AI-generated writing and how important it is to guide the tool to match the audience.

The fifth artifact, the audio script and jingle, was created with Suno. Suno generated the lyrics, as well as generating the actual audio. Suno worked well because it gave me a strong script that included a catchy chorus. The iterations turned it into an upbeat jingle that sounded ready for a radio or podcast ad. I appreciated how Suno made it possible to hear the ad come to life instead of just reading lyrics on a page. This artifact demonstrated how audio can easily be generated to reflect a marketing campaign.

I am satisfied with the results of all the AI-generated content I created for the marketing campaign. The Generative AI tools saved time, sparked ideas, and let me experiment with different formats. It sent me into new directions of thought that I had not thought of on my own. I learned that they work best when I provide clear direction and stay involved as the editor. Claude’s accurate description of the landing page hero image gave me confidence that the design was communicating my intended message, and Suno’s jingle gave the campaign an extra layer of personality. This project showed me that AI tools are most powerful as creative partners that help shape ideas rather than replace human input. I am proud that the final campaign reflects both the strengths of the AI tools and my own decisions as a creator.
